'My doctor said I was a stroke waiting to happen'

"I thank God for giving me a new lease in life"

Dorothy Thomas - Age: 68 **Children:** 3 **Grandchildren:** 7

Result: Carotid Artery Blockage **Symptoms:** None

Hobbies: Church Going, Prison Ministry, Cooking, Singing, Movie buff

Tests That We Offer Detail:

Package 1 Bone Density

Ultrasound Measurement: 100 % Free

Purpose:

Osteoporosis is a disease where your bones become fragile and are likely to break. It is painless and silent in its early stages. 1 in 3 women over 50 will experience osteoporosis related fractures. We help both men and women to know if they are at risk.

Procedure:

By placing your foot in an ultrasound unit, the bone density of the heel is measured with ultrasound.

Package 2 Wellness Gold Pack

Risk Assessments: \$25

6 Point Test Include:

- Total Cholesterol
- Diabetes Test (glucose level)
- Hypertension/Blood Pressure Analysis
- Heart Rhythm - Beats per minute
- Body Mass Index (BMI)
- Calculate Your Ideal body weight

Total Cholesterol: Below 200 is Desirable
Glucose Level: Below 110 is Good

Blood Pressure Stages:

	Systolic (mmHg)	Diastolic (mmHg)
Optimal	Under 120	Under 80
Normal	Under 130	Under 85
High-Normal	130-139	90-99
1 (mild)	140-159	100-109
2 (Moderate)	160-179	100-109
3 (severe)	180 or>	110 or>

Package 3 Stroke Preventive

Carotid Artery Ultrasound Doppler : \$25

Purpose:

Visualizes the buildup of fatty plaque in the carotid arteries that could block flow of oxygen to the brain . If it breaks loose it can flow to the brain to cause a stroke or flow to the heart arteries and cause a heart attack.

Procedure:

The technologist applies an acoustic gel on your neck over your carotid arteries. A painless instrument, a transducer, will be moved around your neck to visualize the inside of the carotid artery.

BMI – Body Mass Index Ranges:

BMI of 18.5-24.9 is ideal.
BMI of 25 to 29.9 is overweight.
BMI of 30 or more indicates obesity.
BMI of 40 or more indicates morbid obesity.

Package 4 Heart Screening

2D Echo Sonogram : \$80

Purpose:

Visualizes the inside of the heart for heart valve leak (murmur), enlarged heart, blockage or stenosis and take measurements of the thickness of heart walls, and Doppler measurements across the valves.

Procedure:

Leads are placed on the chest to test the electrical function of the heart. The technologist applies an acoustic gel on your chest over your heart area. A painless instrument, a transducer, will be moved around the top and to the side of the chest to visualize the inside of the heart.

Questions About PreventFirst® Screenings:

Q: Who needs to be screened? A: Everyone over 45 and anyone who wants to be proactive about his or her health. The National Stroke Association (NSA) states that the risk of stroke doubles after you reach your 50s. However if you have a family history of stroke or heart disease or if you have high risk factors such as being over-weight, smoking, or lack of exercise, you may wish to be screened even if you are in your 30s. Package 2 & 4 are recommended for the entire family including Children & teens under 17 yrs old.

Q: Are they covered by Medicare or Insurance? A: Insurance coverage varies from policy to policy. Medicare generally does not allow for coverage without symptoms. But in some cases, it maybe too late. This is why we encourage you to take advantage of this opportunity. You may submit your receipt to your insurance company for reimbursement.

Q: How long does it take? A: Each health screening generally takes less than 10 minutes. If you are having all of our screenings, we recommend that you allocate about 20-45 minutes. Detailed results are provided on the same day.
